

PRESS RELEASE

Milwaukee, WI – June 1, 2007- IGC Technologies, is proud to announce that they have recently expanded their Dental Laboratory Product Division. The new product line has expanded to better serve both the existing customer base and new prospects in an effort to maximize Dental Laboratory profits!

Long regarded as a reliable, competent, local supplier to the dental industry in the area of plaster, die stones and abrasives, IGC Technologies has increased their product line to include **SILADENT** (Dr. Böhme & Schöps GmbH) *model making systems, investment compounds and duplicating silicones* for the manufacture of crown & bridge appliances. Also new to the product line, IGC introduces *Designer Acrylic Polymers*; twenty-four brilliantly colored polymer powders manufactured with F.D.A. approved tints, used specifically for the manufacture of designer orthodontic retainers. Additional abrasive products for polishing and finishing have been added to the line including *aluminum oxides, glass beads, walnut shells* and *Poliresin® polishing compound*. This unique pumice alternative imported from Germany is a real step saver and economical too. It is designed to last up to 30% longer than traditional pumice products! Finally, two new die-stones have been added to our well-respected **MASTER™** product line. These ADA Type III and Type IV stones have been developed at the request of our existing customer base. Resin-enhanced and easy to pour, the development of these products are a testimony that IGC listens to their customers requests for advancements in product technology and solidifies IGC's number one goal of *Providing Value-Added Solutions for Today and Tomorrow*.

Marge Orlando, Sales Manager for the Dental Product Line has performed extensive market research in the selection of these new additions to the line. "I asked a lot of questions on my visits to both our existing customers and prospects. I was interested in knowing what products *THEY* believed would enhance their buying experience, provide a better value and help to maximize *THEIR* profit margin. We wanted the dental laboratory industry to know that IGC considers itself more of a "partner" than a "supplier". We believe in *Total Customer Satisfaction!*"
